

Oeko-tex® certificate

GTC universal liquid dyes

January 2020

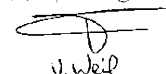

In the present state of our knowledge, we guarantee that the **GTC universal liquid dyes** that we supply, meets the requirements **Oeko-tex® Standard 100**.

However, a dyestuff does not answer by itself to the standard **Oeko-tex®** but only after an application on material.

It is thus up to you to proceed with the validation of these elements on finished article by an accredited organization according to their application to meet their own data sheets.

Residues on your material are obviously connected to the preparation, to the protocol of dye and to the post-treatments of the material. Doses of residues will depend on the labelling of your article.
